Interested in an interdisciplinary degree in History and STEM?

The History Bachelor of Science presents humanistic understanding of the sciences, technology, medicine, and the environment to a broader audience. The B.S. importantly recognizes the changing demands of the labor market with an emphasis on qualitative and quantitative analytical skills, writing/communication, but also integrating the humanities and sciences. The B.S. in History allows students to take advantage of the broad intellectual and career opportunities made possible by a History degree, giving them the chance to gain technological proficiencies while developing the critical thinking and writing skills of the traditional History major.

ACADEMIC ADVISING
Create. Navigate. Graduate.

"I think the most important thing about what I do at the U is sharing with others how fascinating the history of ancient Rome is, whether that be through teaching students, giving public talks, or publishing academic work. There is so much to learn from people who lived thousands of years ago."

Ask me about...

...how people in ancient Rome took care of their somatic needs (eating, digesting, and excreting) in their homes. I am interested in how the most mundane parts of human lives in fact communicate non-verbal codes of status, gender, and mastery.

Courses taught

European History to 1300 | Race, Ethnicity & Ancient History
Roman Empire | Historian's Craft
